Market Place Builder

DAY 5 - TESTING, ERROR HANDLING, AND BACKEND INTEGRATION REFINEMENT

Step 01: Functional Testing

- **Dynamic Routing**
- I successfully implemented dynamic routing in my project. 🚀 The system efficiently selects optimal paths for data transmission. Overall, dynamic routing worked perfectly, ensuring smooth operations.

Screen recording

Create Next App
and 3 more pages -

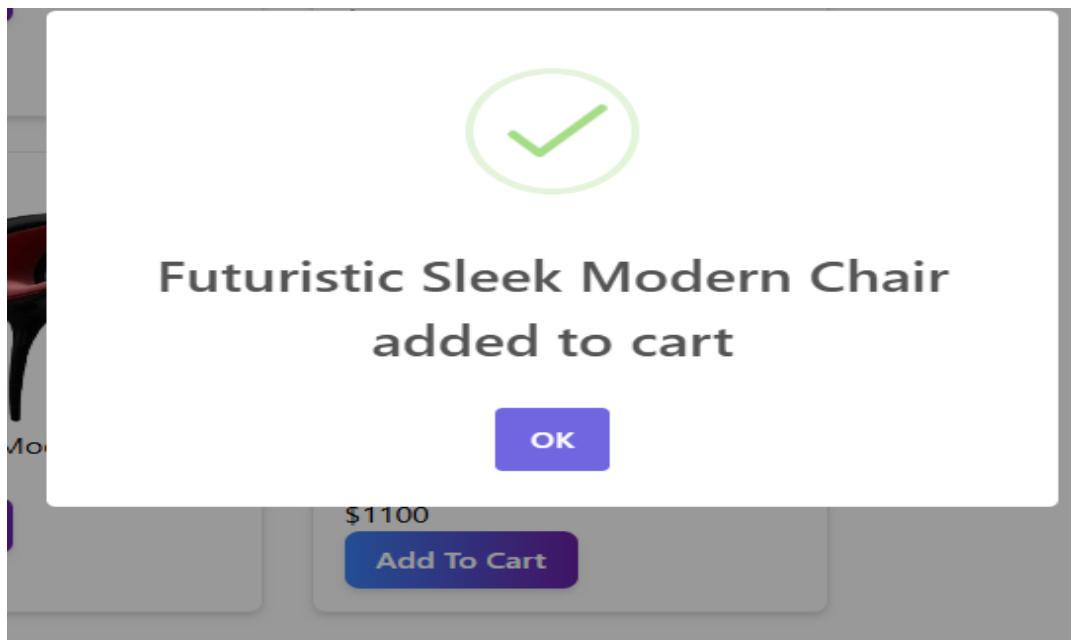

- **Add To Cart**

I successfully implemented the Add to Cart functionality, and it's working smoothly! Users can now add items effortlessly, ensuring a seamless shopping experience.

Create Next App
and 3 more pages -

Step 02: Error Handling

While developing my project that involved **dynamic routing and API data fetching**, I encountered several challenges related to error handling. These issues included **failed API requests, incorrect dynamic route parameters, and handling non-existent resources**. To ensure a smooth user experience and prevent application crashes, I implemented effective error-handling strategies.

Identified Errors and Their Resolutions

1. API Data Fetching Errors

Issue:

While fetching data from an external API, I faced situations where the API request failed due to **network issues, incorrect endpoints, or unauthorized access**. This led to application crashes or empty data rendering.

Resolution:

- I implemented **proper response validation** to check if the API request was successful before processing the data.
- In case of errors like **404 (Not Found) or 500 (Server Error)**, I displayed meaningful error messages instead of breaking the UI.
- I used **try-catch blocks** and **error handling functions** to gracefully manage unexpected API failures and alert users accordingly.
- Implemented **loading states** to improve user experience while fetching data dynamically.

Step 03: Performance Testing

<https://next-commerce-template-4.vercel.app/api/product>

- ✓ API Data display well there is no issue to GET data this is the screenshot of display

Luxury Flower Shell Sofa Chair**Price: \$2500**

A luxurious shell-shaped chair with gold brass metal legs.

Discount: 0%

Stock Level: 2

Category: Sofa

Cantilever Chair

Price: \$780

A modern cantilever chair with a unique floating effect.

**Luxury Flower Shell Sofa Chair****Price: \$2500**

A luxurious shell-shaped chair with gold brass metal legs.

Stock Level: 2

Category: Sofa

**Cantilever Chair****Price: \$780**

A modern cantilever chair with a unique floating effect.

Discount: 15%

Stock Level: 5

Category: Chair

**Nordic Net Red Chair****Price: \$320**

An acrylic dining chair with a sleek and minimalist Nordic design.

Discount: 10%

Stock Level: 20

Category: Chair

**Sobuy Blue Folding Chair Wooden Padded****Price: \$120**

A foldable wooden chair with a padded seat for extra comfort.

Discount: 12%

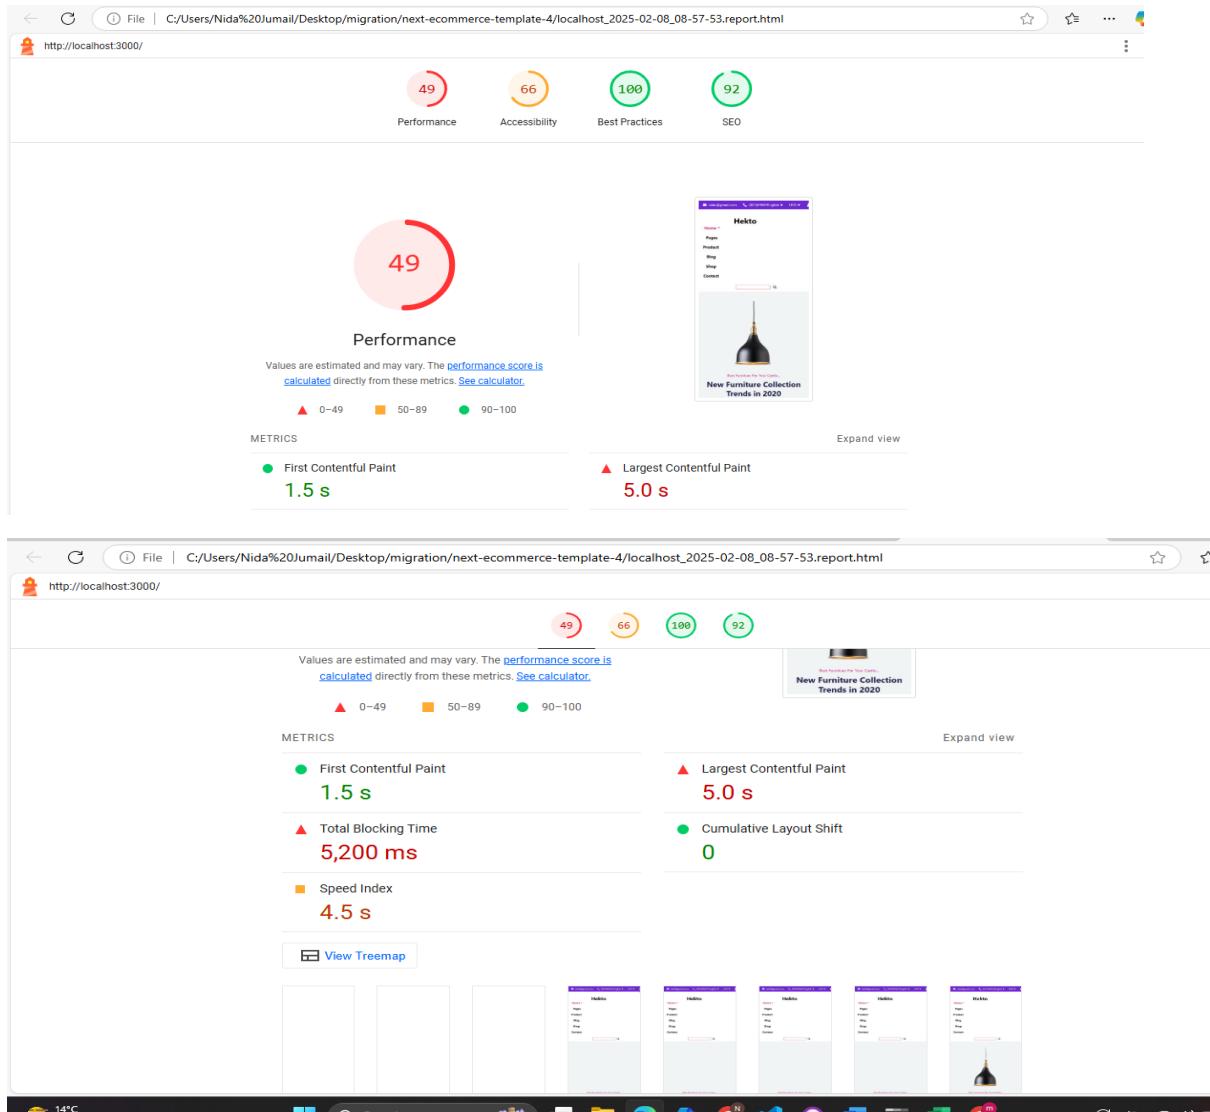

Stock Level: 30

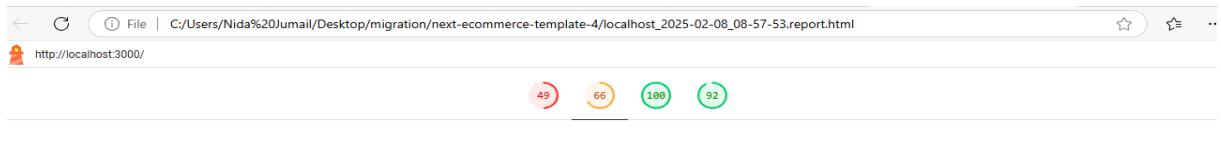

Latest Product

Lighthouse Tool:

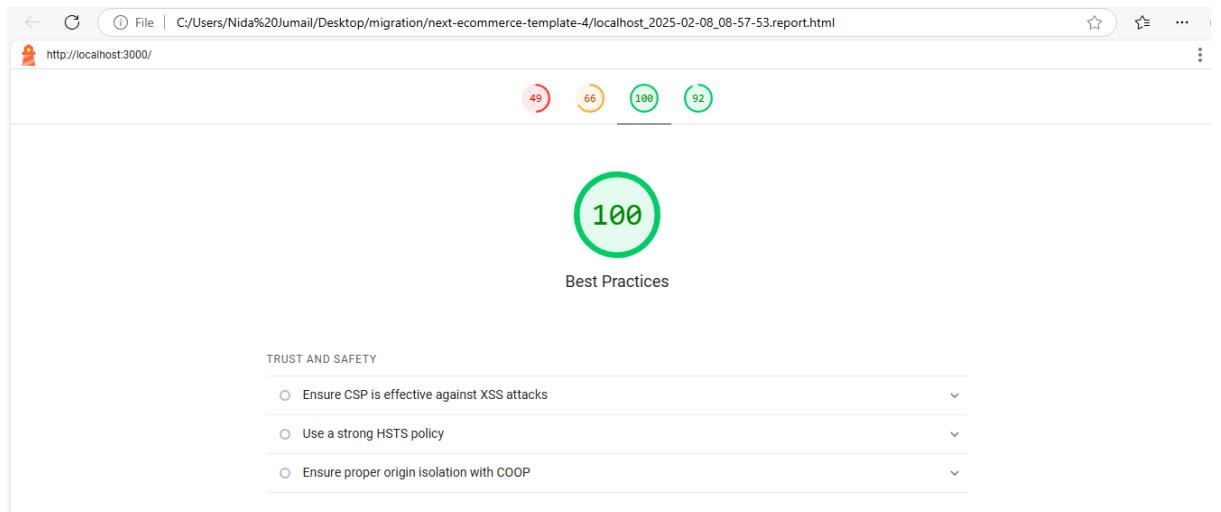

npm install -g lighthouse

Lighthouse <http://localhost:3000> --view

- ☒ **Best Practices (100/100)** – Your website follows industry standards, ensuring security, modern coding techniques, and best development practices.
- ☒ **SEO (92/100)** – Your site is well-optimized for search engines, which helps improve visibility and reach more customers.
- ☒ **Good Accessibility (66/100)** – Your website is fairly accessible, meaning it's usable for a wide range of users, including those with disabilities.

Trust and Safety

Ensure CSP is effective against XSS attacks

Use a strong HSTS policy

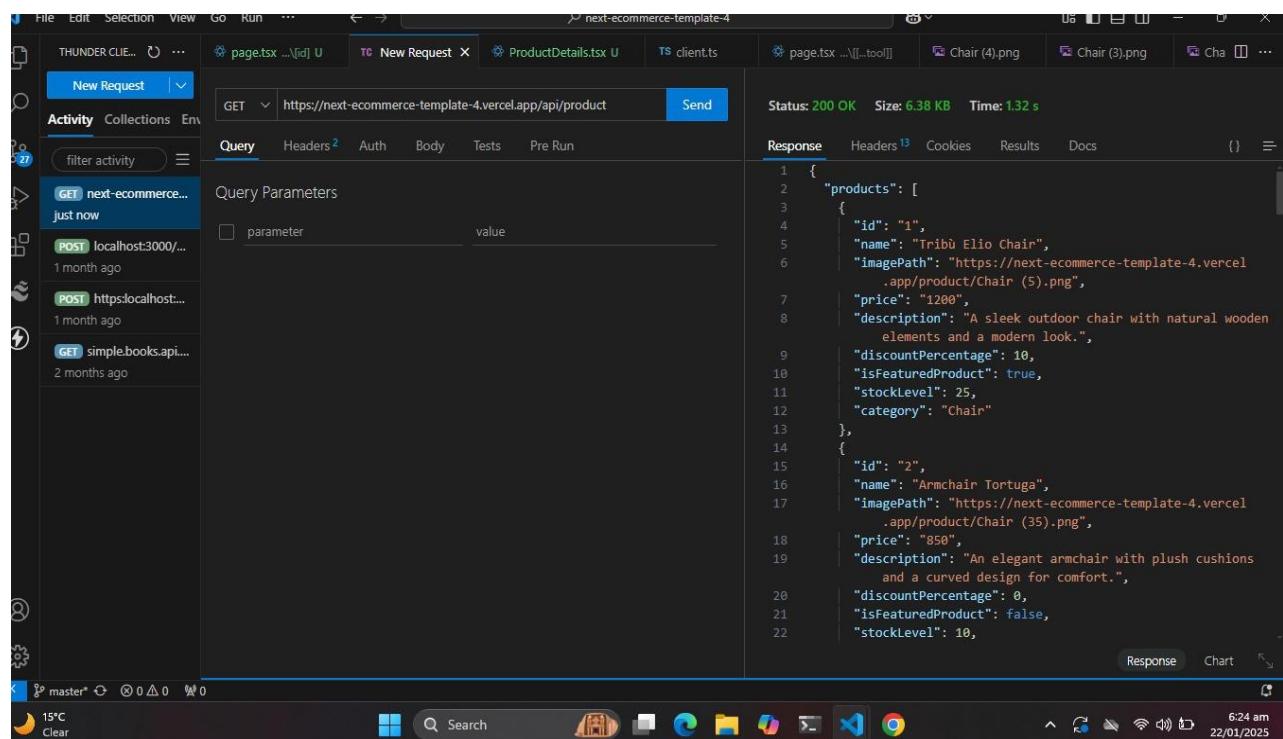

Ensure proper origin isolation with COOP

Hosting platform variables

- I used **Vercel** for hosting my e-commerce website, and the deployment process was smooth and efficient. Its **automatic builds, fast CDN, and seamless integration with Next.js** made it the perfect choice for my project.

Create env file on hosting

```

- **Sentry**

```
const { withSentryConfig } = require('@sentry/nextjs');
```

```
const moduleExports = {
};
```

```
const SentryWebpackPluginOptions = {  
    silent: true,};  
module.exports = withSentryConfig(moduleExports,  
    SentryWebpackPluginOptions);
```

- **Backup** **Disaster** **Recovery**

Here we are using vercel which has automatic feature of backup

Share your experience

- We faced multiple hurdles, especially in **dynamic routing, data fetching, and optimizing performance** using tools like **Lighthouse**.
- **Deployment Issues:** Resolved environment-specific errors . by properly handling .env files.

Additional Comments;

- Working on this e-commerce website has been an incredible learning journey. Since this was my first project of this scale, I faced many challenges but also gained valuable experience along the way.
- Optimized images using Next.js <Image> component and **lazy loading**.
- Learned about protecting API routes and handling authentication tokens properly.
- Error handling (404 pages, API failures, loading states) improves UX.
-
- Faced several deployment issues while pushing the project to Vercel.
-
- Learned how to properly configure environment variables (.env.local) to avoid errors.
